

TABLE OF CONTENTS

## Ch.0 Preliminaries

1. Sets, relations, and functions
2. Sequences and multi-sets
3. Mathematical Induction

## Ch.1 Combinations &amp; Permutations

0. What is combinatorics?
1. Basic counting techniques
2. Permutations & Combinations of Sets
3. Inversion Sequence of a permutation

## Ch.2 Combinations &amp; Permutations of Multi-sets

## Ch.3 The Binomial Coefficients &amp; their properties

1. The Binomial & Multi-nomial Theorems
2. Properties of the Binomial Coefficients
3. The Pascal's infinite array (triangle)
4. Newton's Binomial Theorem & maximal anti-chains

## Ch.4 The Inclusion-Exclusion Theorem &amp; its applications

1. Two forms of the Inclusion-Exclusion Theorem
2. Two forbidden position problems
3. Combinations of finite multi-sets,
4. Counting functions, injections, & surjections.

### Ch. 5. The Pigeon-hole Principle & its applications

1. Two forms of the pigeon-hole principle & their applications
2. Ramsey type problems & Ramsey numbers.

### Ch. 6. Recurrence Equations & their applications.

1. Problems leading to recurrence equations
2. Linear constant-coefficients recurrence equations
3. Non-homogeneous linear constant coeff. rec. equations

### Ch. 7. Generating functions & their uses

1. Finding (standard) generating functions
2. Using generating functions to solve rec. equations
3. Other applications of generating functions

### Ch. 8. Stirling numbers & Other Partition numbers

1. The Difference Calculus
2. Stirling numbers of the Second & First kind
3. Combinatorial significance of the Stirling numbers
4. The partitions of a non-negative integer
